Historical data used may not be a reliable indication of the future risk profile of the sub-fund.

This category is not guaranteed to remain unchanged and may shift over time.

The lowest category does not mean a risk-free investment.

This indicator is based on the historical volatility of the reference portfolio over the past 5 years and places the sub-fund in this category.

Due to a lack of sufficient historical data, the risk indicator incorporates simulated data from a benchmark portfolio. Risk Category 7 reflects the highest potential gains and/or losses for the portfolio. This is due to investments in international equities of small and mid-capitalized companies mainly on the north american market.

The risk category has been determined using the maximum risk limit allowed for this sub-fund.

The following risks may be materially relevant and may not be adequately captured by the synthetic risk indicator:

Currency risk: the risk that an investment's value will be affected by changes in exchange rates.

Use of derivatives: derivatives are used for investment purposes and contribute to obtain, increase or reduce exposure to underlying assets.

Equity risk: the value of equities and equity-related securities can be affected by daily stock market movements.
